Product use manual

The low-voltage serial product manual

Announcements

- 1:the red wire of transformer is for 220V input terminal, the black is for 12V power output terminal.
- 2:please do not install this lamp for place that near the strong sour alkaline, in order to prevent damage the lamp.
- 3:please invite the profession electrician s personnel to install, this will be appropriate.
- 4:the electric wire circuit of this product is for merging connection electric circuit, when you discover the whole light bead is not all bright, check whether light bead is burn down or check if the connection line is contact for good, then replace the light bead; before replacing the light bead, please turn off the power supply , until the light bead reduces the heat ,then you can replace it, in order to prevent burn hand.
- 5:must use the light bead with voltage and power that be specified voltage and power, do not use the other light bead that voltage and power is different, in order to prevent result the bad result for light bead.

Warning

- Before using, please check if the connection of line and plug is perfect completely, but insure local voltage is similar with rated voltage of the lamp.
- when the lamp is working, please do not place any loads on the electric wire.
- while maintaining, please do not turn on power supply, otherwise this will be caused the danger.
- please do not damaged lamp, break such as the lampshade glass, please cut of the power supply, then replace it immediately.
- in installing the lamp or maintaining, please do not let the child near to the light.power switch and total switch and total insurance.
- in stalling process or installing is finished, please it back to safety place that can not get in touch with by child.
- for assurance using safety, should install the current limited switch on wire road, Can not use the super-power light source, otherwise it will be caused the danger and damage lamp.

The low-voltage product guarantee card

Honorific customer:

Firstly thank you to purchase the products for making you satisfied for our service please read this manual carefully and keep this quantity guarantee card

Introduction part:

- 1.This quantity guarantee card must be filled with complete record and also added the finally official seal chapter by the dealer, If not having these, Please seek original purchase place to add the print-mark for guaranteeing your rights, otherwise willnot undertake the duty for guaranteeing.
- 2.In normally use conditions, promised a year's quality guarantee for the transformer.
- 3.the trouble that is appeared in normally using condition which is indicated to the user to use the product in normally condition not having man factor for intentionnally or mistake factor cause damage

When installing, please attention to announcements such as:

1. the product is to choose the upscale stainless steel plank and import crystal as the material be formed by fine manufacturing.
2. the product contains an electronics transformer (working voltage:220v, power:20w) rated power of each light head is 20w the power of light bead is specified for 12v/20w, forbid to use the other large power light bead.
3. before installing please check if the inside connection of a light is firm ,for avoid the circuit that result in break down to bring your harassment during conveyance process.
4. when be installing firstly hanging plank with dish and fix on the screw pole of the hanging plank then fix the hanging plank on the ceiling firm.
5. In installing process please do not tore the protection skin from the stainless steel plank after the whole lamp is fixed on the ceiling completely and switching on the power to confirm check then tore the protection skin towards right direction carefully.
6. Washing method: when the stainless steel plank appears stain or fingerprint only need to choose the paper towel with good quality paper gluing a little amount cleaning powder to wipe gently the section that having a stain forbid to use any cleaning agent.
7. When using remote or divided switch please do not press switch too multifarious and strongly.

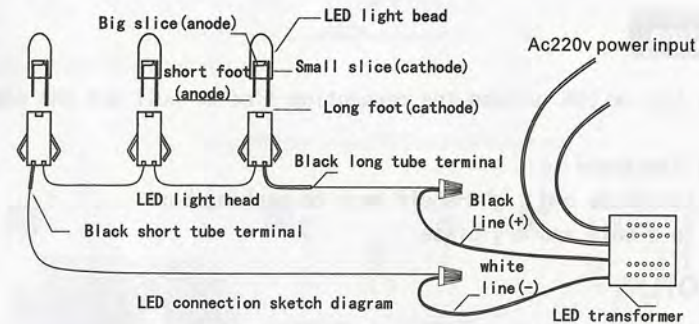

Introduction to LED electronics transformer

Caution: (announcements)

1. LED component is a kind of impressionable product in static electricity while you get in touch with LED light bead ,please do not get in touch with the metal cape by hand, in order to prevent the human body static electricity to damage the light bead .
2. when installing LED light bead, please attention to the cathode and anode of the line-feet (please refer to LED installing diagram) in order to prevent insert wrong to lead the light bead to is not bright and finally damage the light bead.

Caution: (announcements)

1. judging from the length of LED line-foot:the long foot is for cathode, the short foot is for anode .
2. judging from the electrode of LED bead: the cathode of LED with monochrome light is small slice, otherwise is big slice.

Installing requirements (announcements)

1. all of LED connection way must be establish (such as sketch diagram);
2. the black line of LED is for positive pole (cathode: +), the white line of LED is for negative pole (anode: -).
3. the connection of LED light head group and group: the white line (-) connect with the black.
4. the long foot of LED is for cathode, It is connected with black line terminal, the short foot of LED is anode, It is connected with white line terminal.
5. LED light bead must be inserted into relevant position for one time, do not insert towards opposite direction, before switching on electricity, please check it carefully, otherwise this will damage all light bead.
6. If you use the controller, please refer to the relevant introduction.
7. If there is an unknown place, please contact with our company on time.

Replace light source

turn off the switch, pull out the plug.

after temperature of the light source is cold, take out the old light source.

read the mark-card. lighting-mark and introduction carefully, installing the light head with new similar type and power light source.

Cleaning

- turn off the switch, cut off total power switch or take out the fuse.
- take out the lampshade and cleaning, do not wipe any section of light-body with causticity liquid, do not let the liquid enter into inside of light.
- wipe the light-body with the clean soft cloth, do not let the lamp soak into any liquid.

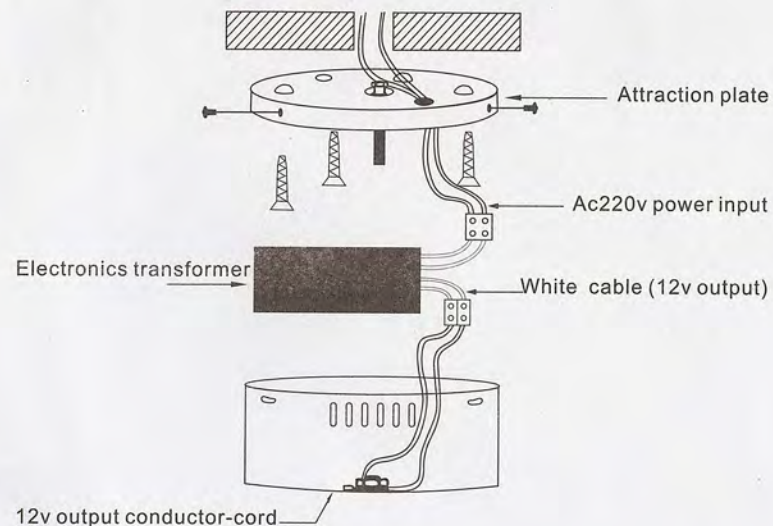

Storage

- turn off the switch, unload the connection line or pull out the power plug.
- take out lampshade to
- put the lampshade and light-shelf back to packing box.
- storage in a cold and dry place.

Caution:

- Before installing using and maintaining, please read this manual carefully, after using, please keep it well for future reference. please insure installing of the lamp is firm or put steady. while maintaining the lamp, please wear your gloves.
- all electricity connection must be suitable for electricity safety in local place, must be guided by profession personnel for installing and maintaining.
- do not let the lamp soak in water, let it work in a well ventilated room
- the main power supply must have the power switch, every connection terminal must be firmly connected, ground terminal must be dependable connected with the ground, should invite the profession personnel to purchase the appropriate current limited switch for you according to the mark-card. light. this manual.
